Lajes LPLA

The airfield of Lajes is very open; you can drive along the single runway on a very short distance. The Americans don't have hangars in use. From the nearby hills on both sides of the runways you have a great view on the whole airfield. Also from the civil terminal you have a great look and there a lot of people parking along the runway watching aircraft. Great airfield with great spotting. (For example much easier then for example Mildenhall !!) In the coming weeks. when the aircraft from the Gulf are coming back this airfield will be very busy. If you stay in Praia (few minutes drive from the airport) you can even spot the aircraft from your hotel. Also hotel and car prices are not very expensive. Nice place for short vacation.

Info:

Beja LPBJ

Beja lata / lcao code					
---	--	--	--	--	--

For those planning to visit this area it is possible to get the Epsilons from outside the fence (if they Are out) they are usually locked up at Weekends. if you take the N121 Beja to Lisbon Road for approx 4Km. take the right turn small sign posted to S. Brissos you will come to the end of the runway under the lights if the a/c are landing this end you should get them easily Alpha's and Epsilons. if they are taking off the other end you should get the epsilons thanks to there large wing numbers. the Alpha Js will probably be to high. To view the Epsilon ramp continue along the road until you come to a large area of eucalyptus trees around a man made pond on the right (if you get to the village on the left you have missed it) take the Stone/dust track up the field as far as possible approx. 300m park up and follow small wire fence towards tall wooden slatted base fence in front approx. 100m. You should now be opposite the Epsilon Ramp and hangers. numbers easy to read with 20x. Temp was 41°c when I checked this out and numbers could just be made out through haze with perseverance. although I did have the advantage of knowing them anyway. so early or later may be better. The Epsilons first flight is 08-30 and if night flying last departure is 21-00hrs. pilots usually make at least 2 flights per day. they night fly every other night. and have a late start the next day if they do nights. I did follow the road round to see if you could get the other end but gave up as it kept getting further away. From past visit the Alpha jet R Will not be visible from fence as it is protected by a row of trees in front.

If travelling from the Algarve (if its still there) its now possible to get to Beja in 1.5/2hrs thanks to the new Motorway that opened early this year. a one way trip to the Beja turn costs 4.40 Euros.
