You are correct re photo's. though I never saw any signs expressly forbidding them. but it was confirmed by a Carabinieri officer who gave us a tug at Frosinone (the only plac and they were on a practice alert). and we kept the cameras packed in the boot of the car whenever we were near an active field. We always kept ALL our cameras in the boot. zoom lenses & video cameras included.

Aviano									
USAF Airbase									
spotted on the 05 end of the runway in between the cornfield behind restaurant "Al Baffo". (except for the gateguard off course ;-)) This is probably the best spot for taking landing shots. But you are unable to view departing aircraft. I had no trouble with the police or whatever. as you are pretty much invisible from the main road. It is advisable to take a stepladder to get above the corn which is rather high in this period of time. Thanx a lot to the Aviano spotters group for the info on directions! (http://digilander.libero.it/31ATSG/)

Cervia itself is easy to find. If you are on the road Ravenna - Rimini (16) and just when you're leaving Cervia there are signs pointing to the 5 Stormo. If you follow these signs you'll See the field appearing at your right side. As most Italian airbases seem to be, the field is pretty open, but heatwaves are a problem especially in summer.

Coming from the highway ahead towards the maingate. Just follow the signs. Now pass the maingate on the leftside. After a few hundred meters you can see them on your right side. I parked the car on the left side near a house/farm just before the road makes a turn to the left. From there it's possible to read most of the NH.500's.									
If you pass the maingate on the rightside and keep on following the fence you might be able to spot some AB.412's of the Corpo Forestale dello Stato.

Grosseto Airbase lata / Icao code								

We were staying around 10km from the base and it was "on the way" so passed the base a few times over the two week period. The most Staffs we saw "on the line" were four. Trying to pole them off is a complete waste of time unless it's within a couple of hours of dawn or sunset. due to the heat haze and the grey on grey codes. Codes are all you can get. They also use Gulf style sun shelter garages to house F-104s. However. you can still pole off the codes of the Staffs underneath these. As the campsite was only 5 kms away. we could hear everything that was flying. The base seemed quiet over the fortnight. around 8 aircraft flew each day. At the start of our first week they flew around three night missions but only on the Monday & Tuesday night. No flying was done on the first Friday. but on the following week it was Thursday when there was no flying. Overall. I got around 12 active F-104s with 6 being the most logged in one visit. Not a place for large numbers. One note. they always seemed to takeoff towards AND land from the sea. This meant they always came very close to the campsite - what a beautiful sound !!

2. Nice and easy. Main road runs around two sides of the field. and like most roads in Italy. it is busy. There is a pull in place by a small industrial unit opposite the 4 Stormo ramp at the junction o busy roads which yielded a reasonable haul of codes at least. If you are feeling particularly brave. the road which runs past the main gate is fifty yards from the line. but we declined to stop. more about the maniacs driving than the military security!!

Take a left past the industrial unit and the second road runs down the length of the fence. going past several hangars (and a couple of wfu stars). This road is the best for seeing the flight line and the sun shelters. Between the hanger areas. on the road is a farm entrance which allowed a safe stopping place to pole them from within the car.

Allow yourself to go past the base and very shortly thereafter is a turning to the left. Take this. and the road then runs back towards the base. going under the runway lights (opposite end from the Go left again at the end and take any of the small "agricultural" roads to your left. They are all paved. they just seem to go past small holdings and allotments. They will lead to the small track that fence. past the liaison squadron hangar (well worth it. the stars taxied close to the fence for take off so that we could read the MM numbers. Most of these tracks had barriers or no entry signs on them. No problem continue to the end of the road to the main Grosseto-Marina road. turn left for about 100m and these a left turn toward s Continue up the road beyond the houses and it leads you to the liaison squadron.

The liaison sqquadron has a couple of AB212s. an S208M (yum) and an MB339 detached from 61 BA.. In all my visits. no AB212 or S208s were seen. although there was a MB339 which never moved. Though this may also be preserved ? (AB212 were seen & heard flying down the beach)

Very important now. Go to the little civvie terminal which is signposted from the proper road on this side of the base. Drive into the car park to the far side and park up next to the fence. What do The answer is a compound with 20 Stars in it!! Thought the count should be 20. but some were just fuselages without fins so difficult to make an accurate headcount.

3. Runway is 03/21. There is a road that runs along the NW side of the field from which you can see the runway. Stopping at either end seemed rash. so I drove back towards town from the main i turned left at the first intersection and turned left again under the approach where I was across fields and a canal from the approach to 21. (I think it was 21; I seem to get turned around there. A rate it was at the same side of the airfield as the main gate.) The area where I stopped consisted of a bunch of small garden plots and I got nice pictures of F-104 and visiting Belgian F-16's. taking off in the morning and landing in the afternoon.

At the other (south I think) end I parked where a new bicycle path crossed the road and walked along the bicycle path til I was on the side of the approach that had good light. and got some nice approach pictures while they were going that way.

-----------------	--	----------	--	--	--	------------------	--	--

1. Nice little base. Drive into the town and follow the signs for the base until you get a right turn (again signed). This will take you over a small level crossing and as you cross this the base appears on your left. You can see the stored P166s from here. Very pleased you pointed these out. as I only saw them on the second time round. and as you follow this road (which then runs by the perimeter fence) the rest of the dumped stuff will appear. DC-6 & four C-47s were just the other side of the fence. You can stop on this road as there are a few pull in place on the base side. Again a good pole and late/early arrival is best here. but you'll get the wfu/dumped stuff whatever time you show up. There are S208s and gliders based here (military and civil) and they tend to fly later on. There is also a detachment of MB339s. All are viewable from the fence. but not so easy to read as the 208s at least have grey codes on grey camo. Never saw any MB339s and didn't really bother with the 'tin'. We did do full lap of the base and drove past the main gate which was guarded by a F-104 in dramatic pose. Also lots of military police. This was a family holiday. so I didn't have the chance to time visits to Pisa & Guidonia. They just fit in with other touristy things and the visits were around midday - just about the worst time for the heathaze. As we drove to Italy in our UK reg'd car. I was conscious that we were very obvious to any security as we stopped & started around the fences. That said. we were never hassled. If I was driving a local hire car. I would have pushed my luck further (but couldn't have called at Sinsheim & Speyer on the drive down !!). The F-104 is on a gate on the town side of the airfield e.g. opposite side to the aqua park Its easy to see from the road

Latina		Istituto Statale Agrario							
---------------	--	--------------------------	--	--	--	--	--	--	--

As the SS148 becomes the Latina by-pass, take the 1st exit to Borgo Piave.

Info: At the roundabout take the exit to Roma. Then follow the signs to the Institute. (At the one junction with no sign, take the right fork)

Info: It is preserved along the SS148 road even north-west of Borge Piave. So one can wonder if Latina is the right place to mention it by.

Orte									
Take the small road on the west of Orte to Bassano and after 3.8km the barracks will appear on your left. The F-104 is easy but the Gina is a bit more to the right of it. Walked to the guard And asked for taking a picture. This was not possible. but the front part of the Gina was easily visible from there. They could not tell me if more aircraft were present inside the barracks.

Pisa Airport lata / Icao code									

A. Go to the terminal and drive down to the left as you would see it from the railway station. Follow the road around past the GA ramp (I'm not a civvie spotter but it had some nice biz to my surprise) and then take the first right when you get to the little row of houses on your right. This takes you to a dead end, but you can see lots of the wfu G222s from here. This spot is ideal for the wfu G.222s on the west side of the base (as well as the airliners & light airport) Once your done reading them off, go back to the houses and turn right. Take the next right after the houses, and this will take you under the lights. keep right and you'll find the ubiquitous gravel track. Get on it and follow it (it's a bit bumpy at first but it gets a lot better). This takes you past the maintenance and a lot of dumped G222s. the dumped Somali one (close enough> to photograph, and then, if you have the balls to stick with it, right past the control tower and parallel with the runway right to the other end. We did this, but from the other direction as we didn't know where to go and were making the best of it you can read all the military ramp from here, although a good pole and an early or late time of day is essential. We drove from the terminal area as far as the railway bridge, as which point the road looked to have been ended by digging it up. We could only just make out G.222s on the opposite side mainly sticking out of hangers. A couple of the wore an all white type colour scheme. The preserved C119 is viewable from the first point (Railway bridge) we mentioned, but there is a road busy past it on the other side of the base (bloody busy this one, you can't stop). Didn't see the C-119 from there, but did find the military gate. They have put up 'heathrow style' covering to the fence on the road to the gate so you can no longer see though it. We turned right to follow the base fencing and after turning round we could then see the C-119 and G.222s but were all nose on. We then drove in to the freight area driving back to the terminal area, entering just before the railway crossing. This gave us a side on view of these G.222s. B. If all you need to do is see this machine, then it is (or at least was in January) visible from the viewing terrace within the terminal, on the upper level. It is parked at the edge of the main part of the military base on the right of the terminal.

No chance for any decent photos from here as the viewing area is inside and the C-119 is some way away.

You may also see a couple of propliners (748, F-27) on the cargo apron, which can be seen by coming out of the terminal and walking to your right (through the car hire areas) For about 1/2 mile - again photos might be difficult because of the fences.

Info:	For about 1/2 mile - again photos might be difficult because of the fences.

Pisa technical school, pisa, Via Contessa Matilde

If you're in Pisa on holiday, I assume you'll be going to the tower. There is a technical school with four frames (2 ginas, a Sabre and a T33) called ITI Da Vinci just over the city from the tower (I think it's to the east, but close to the coach park for the tower). Worth a visit as they are easy to see from the outside. I usually fail miserably when trying to find things in town centres, however these were very easy. Once the leaning tower re-opens later this year, you'll probably look down on the airframes. Until then, The school is across the road from the wall that runs around the north side of the area in which the tower stands.

Info:	The school is across the road from the wall that runs around the north side of the area in which the tower stands.

Roma-Ciampino

Airport

lata / Icao code

Location:

The airfield is to the south east of Rome, immediately outside the Rome ring-road. The runway is almost north-south, and there is only one runway.

Layout:

To the east of the airfield is the town of Ciampino, and this has blocks of flats and buildings right up to the fence/wall. The civil terminal is on the western side of the runway, about halfway along the runway length. The main military ramp and hangars are to the north of the terminal and the biz and hangars are to the south. The 'Protectione Civile' Canadair CL.415s are parked in this area.

Spotting:

As you exit from the terminal towards the car parks, directly ahead of you (and across the other side of the car parks) is the general aviation terminal. Off to the right of this ter is a small workers car park, and you can usually find some spaces in there to see the CL.415s. There are also lots of civil spam-cans here, but we won't talk about them!
 As you leave the airport terminal area by the main road you pass the entrance to the military area on the right; watch out for the HU-16 Albatross on the gate. At the airport ex turn left and join the main road heading south. Take the next junction/exit from the main road and at the junction turn left to get to the southern end of the runway. There is a small pull-in where you can park for a short while to see stuff on the biz-jet ramp from the opposite end. Continue past the end of the runway and take the first left turn. There is another chance to stop and look across the field to the biz-jet ramp again. You then head into Ciampino town and a messy one-way system. The one-way system works anti-clockwise around the town centre, so you need to find your way to the northern end of town, and then back down to the western edge of town where some minor roads lead to the fence or wall of the airfield. The fence is covered in netting but you can see through gaps. This area gives you a view directly across to the terminal.
 Continue out of the northern end of Ciampino town and you pass the entrance to the old military area, and just past that you get an open view of the northern end of the airfield but nowhere really to park and wait! From here you can see across to the mil ramp - Falcon 50s, Falcon 900s, A.319s and (maybe) VIP SH-3s. Also visible from here are some stored biz-jets and a stored AMI DC-9, just behind the buildings on the old military site.
 As you continue north on this road, the road makes a sharp left turn to pass the end of the runway. At the corner there is a small motor-bike shop, where you might be able to stop; I don't know how the shop people would feel about you waiting there for a long time.

General:

Remember that it is a military base, and a lot of biz-jets operate from there. There are regular patrols inside the fence, and in most places where you can stop you will be notified. If you are flying in/out of Ciampino there are views towards the runway from the departure lounge area, but no views of the military or biz-jet ramps. Check the weather before you fly to Ciampino, and try to work out whether you will land from the north or from the south. If you land from the north, try to sit on the left of the A/C; after landing the a/c will slowly taxi to the terminal past the biz ramp.

Roma / Isola Sacre

Ex Italian AF Convair 440 MM61833 continues to be used as a bar and restaurant at Isola Sacre, which is south of Rome Fiumicino airport. Leave LIRF south on S296, cross the river, a road joins from either side, continue on S296 (Via della Scafa), at cross roads with "Via Monte Cengio", turn right down Via Trincea Delle Frasche (now heading South West) and it is on that road on the right further down. The nose tail and outer wings stick out of a huge glass greenhouse behind a high wall. <http://www.maporama.com/share> Maps-select Italy, type in Isola Sacre under 'city', go magnification 9 and look for junction in S.E. corner of map. (Ignore any location circle on the map. That's the postcode centre not the Convair)

Sora Scrap yard									
Take road SS82 from Isola del Liri to Sora. Just before Sora there is a roundabout. near the Banca del Fucino. where you go right in the direction of Arpino. Just over the bridge you can find scrap yard Difolio on your right. The AB47J is parked on top of a roof with a truck and other bits. Unfortunately the owner does not speak a single word of English. I asked to climb on the roof to confirm the registration. but that was not an option.									
Info: Went looking for the 2 AB.47J's last noted in 1991 and found 1! Going North on the SS82. just before the Centro turn right at a roundabout signed to Atina.Cassino and Avezzano (in other words. a bypass) A few hundred metres down here the a/c is displayed on the roof of a scrapyard on the right. Unfortunately it was dark and we could not identify which one it was

Taranto 65 Deposito Territoriale Taranto									
It's on the north side of the SS7 (the actual road-name on the sat-nav is 'SS7ter') driving east out of Taranto. about 1.5 miles East of the Naval Arsenal (G-91 & MB.326 preserved). there is a left turn '65 Deposito A.M.' which is in a dip in the road. which is before you get to the SP78. MS Map-point lists the road-name as 'Strada Deposito AM' but we saw no road-signs to confirm this. And it does not appear in our sat-nav either!									
Info: The RT-33A is easily visible from the main gate (deserted. and guarded by loose 'noisy' dogs) partially hidden by trees in a 'sludgy brown' colour-scheme.

Treviso-San Angelo Airfield lata / Icao code									
You can see both aircraft from one location; GE: N 45 38 41. E 12 11 52 The location is in the town of Canizzano on the south side of the airport. Drive into the street 'Via Mure'. next to the Car (14 Nucleo Elicotteri) gate. from the road 'Via di Canizzano'. After about 300 metres park your car when the road makes a sharp turn to the left. To your right is a chain with a sign 'private proper just step over it and walk about 50 metres. To your right is a wall and behind is the G91. It wears no code. the MM was not visible through plants and it looked like it had just received a fresh pain of coat. If you look towards the river you can see the AMX- maintenance center and in front of it is the special color AMX. The AMX can not be seen from the civil side.
